

Your Starter Pack to Agentic Automation

Jul 31 – Aug 2, 2026, | 3 Sessions | 1.5 hrs each | 6:30 PM
onwards

Chapter 1 today: RPA & Agents — Better Together

Webinar Series Roadmap

Three days, one journey — from Automation to Agents

UiPath Community

Fri, Jul 31

Chapter 1

RPA & Agents:
Better Together

👉 WE ARE HERE

Sat, Aug 1

Chapter 2

Vibe Code Your
First Agent

Sat, Aug 1

Chapter 2.1

Agent Builder
Challenge

₹7,500

Sun, Aug 2

Chapter 3

Campus, Careers
& AI Agents

Meet Your Speakers

Senior HR Executive

CHAPTER 1

RPA & Agents: Better Together

One follows the rules. One thinks. Today, you'll understand both.

Who Am I ?

13+ years in tech — started with VBA macros, now lead RPA + Agentic programs

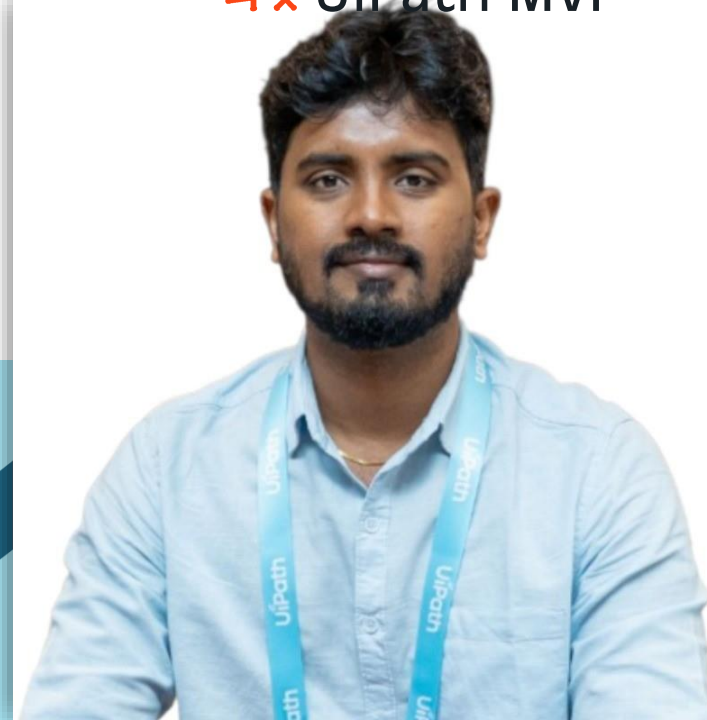

Recognized 4x UiPath Community MVP — contributing through technical leadership, mentoring, and knowledge-sharing across the global UiPath community

Architected enterprise Agentic Automation solutions using UiPath Agent Builder & Maestro, integrating LLMs, RAG, and enterprise knowledge bases into production automation

Srenivasan K

Technical
Architect

4x UiPath MVP

What Are We Covering Today?

- 01 What exactly is Automation?
- 02 Why is it such a Game Changer?
- 03 Where Automation already hides in your daily life
- 04 Introducing RPA — the loyal doer
- 05 AI Agents — the one that thinks
- 06 RPA vs Agent — who does what?
- 07 Real business examples + UiPath platform tour

Take a Moment...

Do you open and read 40 emails, one by one, every single morning?

Do you copy-paste the same Excel report every month-end?

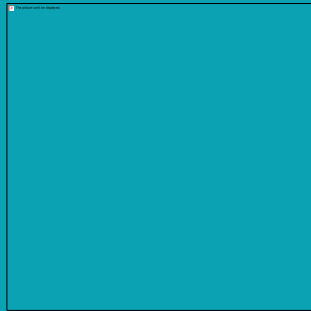

Do you type the same data into 3 different systems?

If yes — that's exactly the time we're here to give back today!

So, What Exactly Is Automation?

Using technology to hand off repetitive human work to a machine.

☹️ BEFORE — Manual Mode

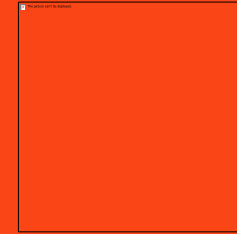

"Same Excel copy-paste, every single day..."

Slow • Repetitive • Boring • Error-prone

You'll burn out before the spreadsheet does.

🤖 AFTER — Automation Mode

"Relax, I've got this one handled!"

Fast • Consistent • Tireless • Accurate

(bot) has entered the chat □

Why Is This a Game Changer?

UiPath Community

Saves Time

Hours of work, done in minutes.

Zero Errors

The system does exactly what it's told, every time.

Works at Scale

What one person does for one record, it does for a thousand.

Future Skill

Needed across IT, Finance, Healthcare and beyond.

This Is All Automation!

You've been using it without even noticing...

UiPath Community

UPI Auto-debit

Your rent/EMI gets auto-paid every month

Food Delivery Tracking

Live status auto-updates on Swiggy/Zomato

Spam Filter

Gmail auto-sorts spam out of your inbox

Google Maps ETA

ETA is auto-calculated using live traffic

This is exactly the foundation of what you'll learn today — no coding needed!

So, What Exactly Is RPA?

Robotic Process Automation (RPA)

Software "robots" perform the same actions you do on your desktop — clicking, typing, reading screens. Give it a rule, and it follows it exactly.

🗨 Simple analogy:

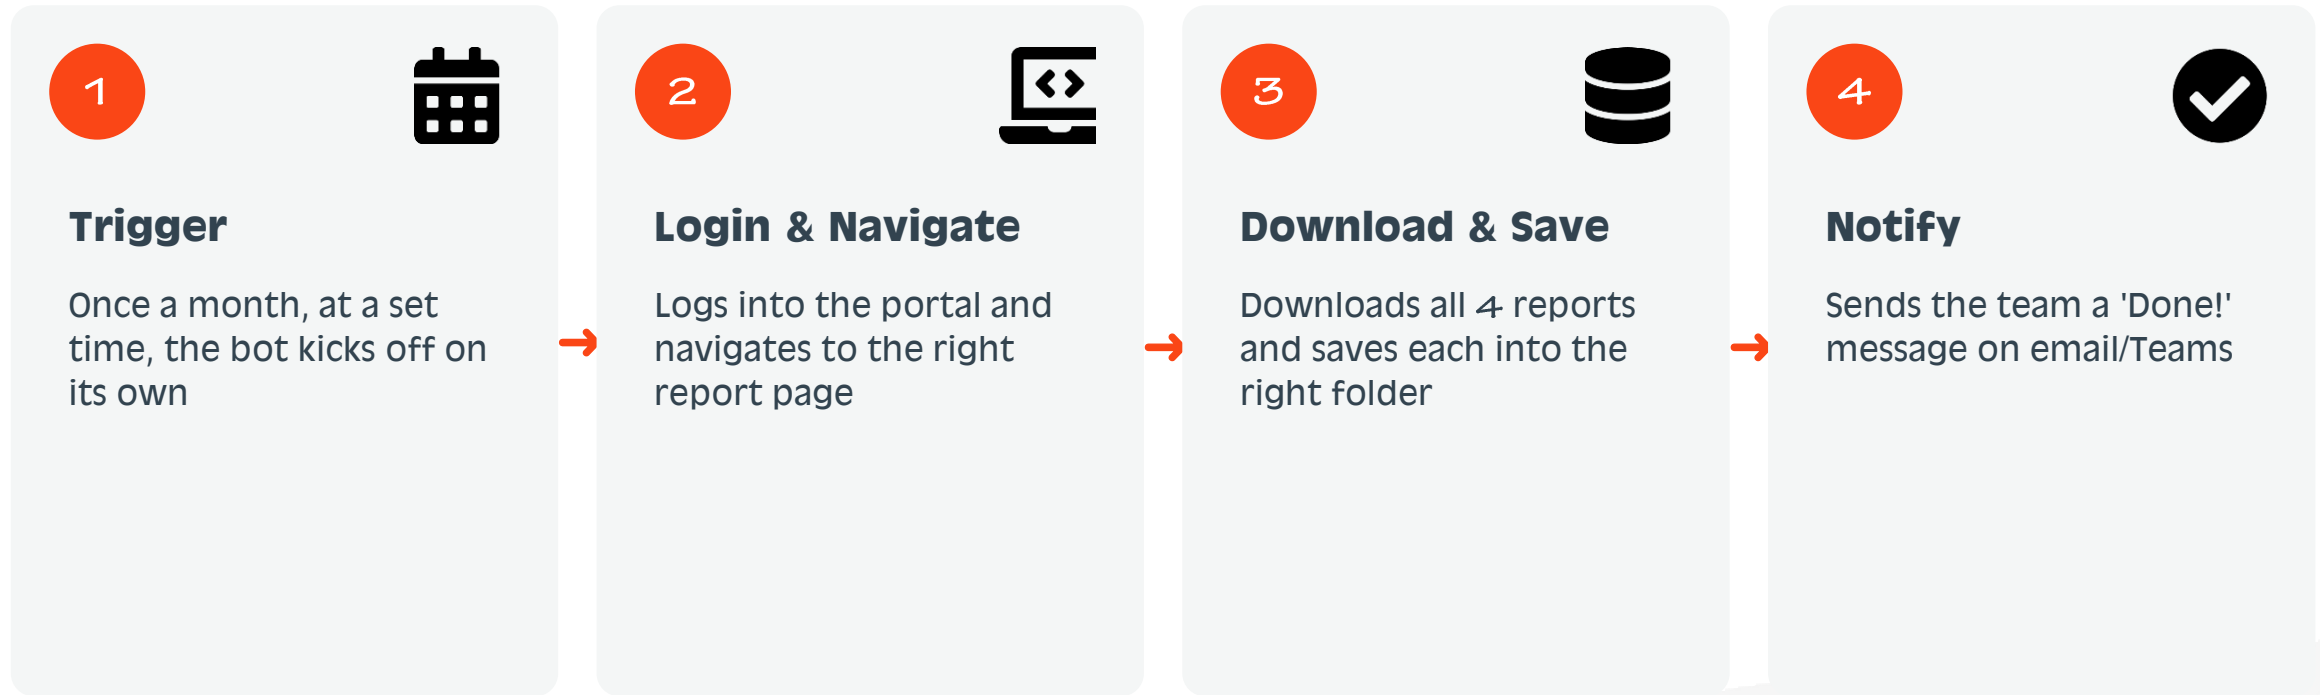

"A super sincere assistant — show him once how to do something, and he'll repeat it exactly, forever, without ever getting tired. But he only knows what you showed him."

**Rule-based
Repetitive
Rules don't change,
and it never deviates!**

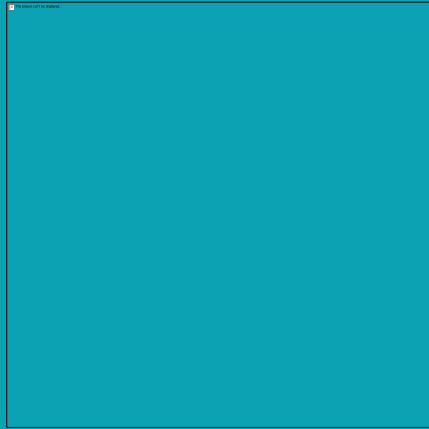

RPA at Work — A Real Example

Downloading Monthly Financial Reports at a Bank

Note: staggered timing between downloads to avoid overloading the portal — classic real-world RPA design touch.

But... RPA Has One Weakness 🤨

"The button moved... what do I do now?! 🤨"

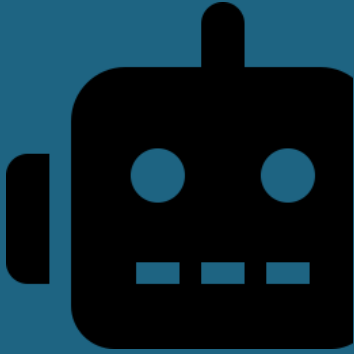

RPA bots are extremely loyal — but **literal**.

- Screen layout changes → the bot gets confused
 - An unexpected scenario shows up → it can't make a judgment call
 - It never thinks beyond its "if-this-then-that" logic
- This is exactly where a little bit of 'thinking' comes in. That's up next.**

Enter: AI — The Brainy Friend ☐

UiPath Community

RPA is the hands and feet... AI is the brain. Together, they make the complete package.

RPA bot

"I only do exactly the steps I'm given."
Hands & legs of automation

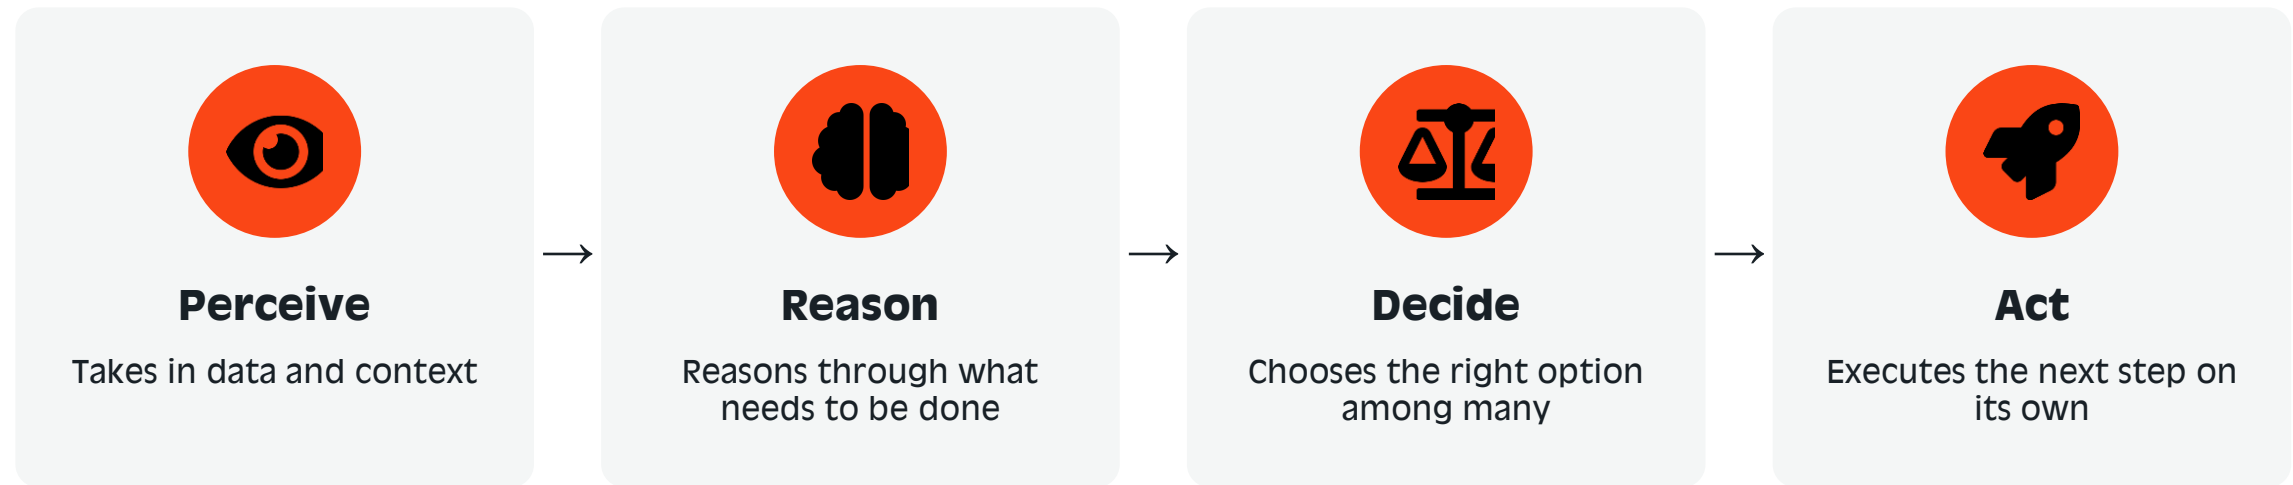

AI / LLM

"I understand the situation and make my
own call."
Brain of reasoning

So, What Exactly Is an AI Agent? ☐ → ☒

UiPath Community

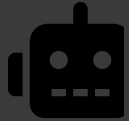

It doesn't just follow rules... it understands the situation and decides for itself.

💬 "Like a smart new employee — even without a complete instruction manual on day one, they read the situation and act sensibly!"

Let's Make It Real: Your Delivery App, Upgraded ~~by~~ ^{for} Community

Remember the 'Food Delivery Tracking' automation example earlier? Let's see the SAME app, thinking like an Agent.

Rule-based bot: "Sorry, this restaurant is closed." — and stops there.

AI Agent: Adapts on the spot and still gets you fed. Let's watch how.

Perceive

Favourite spot is closed. It's raining. You like spicy, non-veg, ₹300 budget.

Reason

Which nearby places match your taste + budget, and still deliver in the rain?

Decide

Restaurant B — 4.3★, similar spicy non-veg menu, ₹280, delivers in rain.

Act

Places the order — or shows it to you for one quick tap to confirm.

💬 **Same brain — Perceive, Reason, Decide, Act. Just handed a messier, real situation than the simple 'restaurant is open, add to cart' happy path a rule-based bot expects.**

Rule Follower vs Thinker ☐

Two teammates — both essential, but very different jobs!

RPA Bot

AI Agent

Nature

"I only do the step I was told"

"I read the situation and think it through"

Best for

Repetitive, rule-based tasks

Tasks that need judgment

Handles surprises?

✗ Bot gets confused

✓ Reasons and adapts

Needs exact steps?

✓ Yes, needs exact steps

✗ Just give it the goal

Analogy

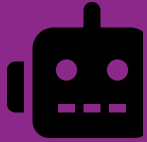

Sincere assistant

Smart colleague

Example 1: Loan Processing

What happens when a Loan Application comes in at a bank?

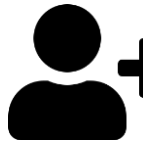

What RPA does:

- Extracts data from the application form
- Fills customer records into the credit-score system
- Organizes documents into the right folders

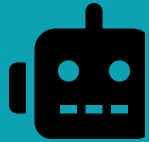

What the Agent does:

- Analyzes credit score, income & risk to make a call
- Decides: Approve / Reject / "Escalate to manager"
- If it's an unusual case, it asks a human on its own

Example 2: HR Onboarding

What happens when a new employee joins?

What RPA does:

- Auto-creates email ID, system access, laptop request
- Fills the employee record into the HRMS
- Tracks the welcome-kit checklist

What the Agent does:

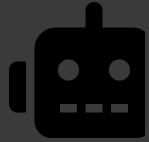

- Directly answers new-hire questions (leave policy, benefits)
- Recommends a training path suited to their role
- Escalates to HR whenever there's real confusion

Example 3: Customer Support

UiPath Community

When a customer raises a complaint ticket...

What RPA does:

- Logs the ticket into the system
- Pulls up the customer's history
- Sends a standard acknowledgment

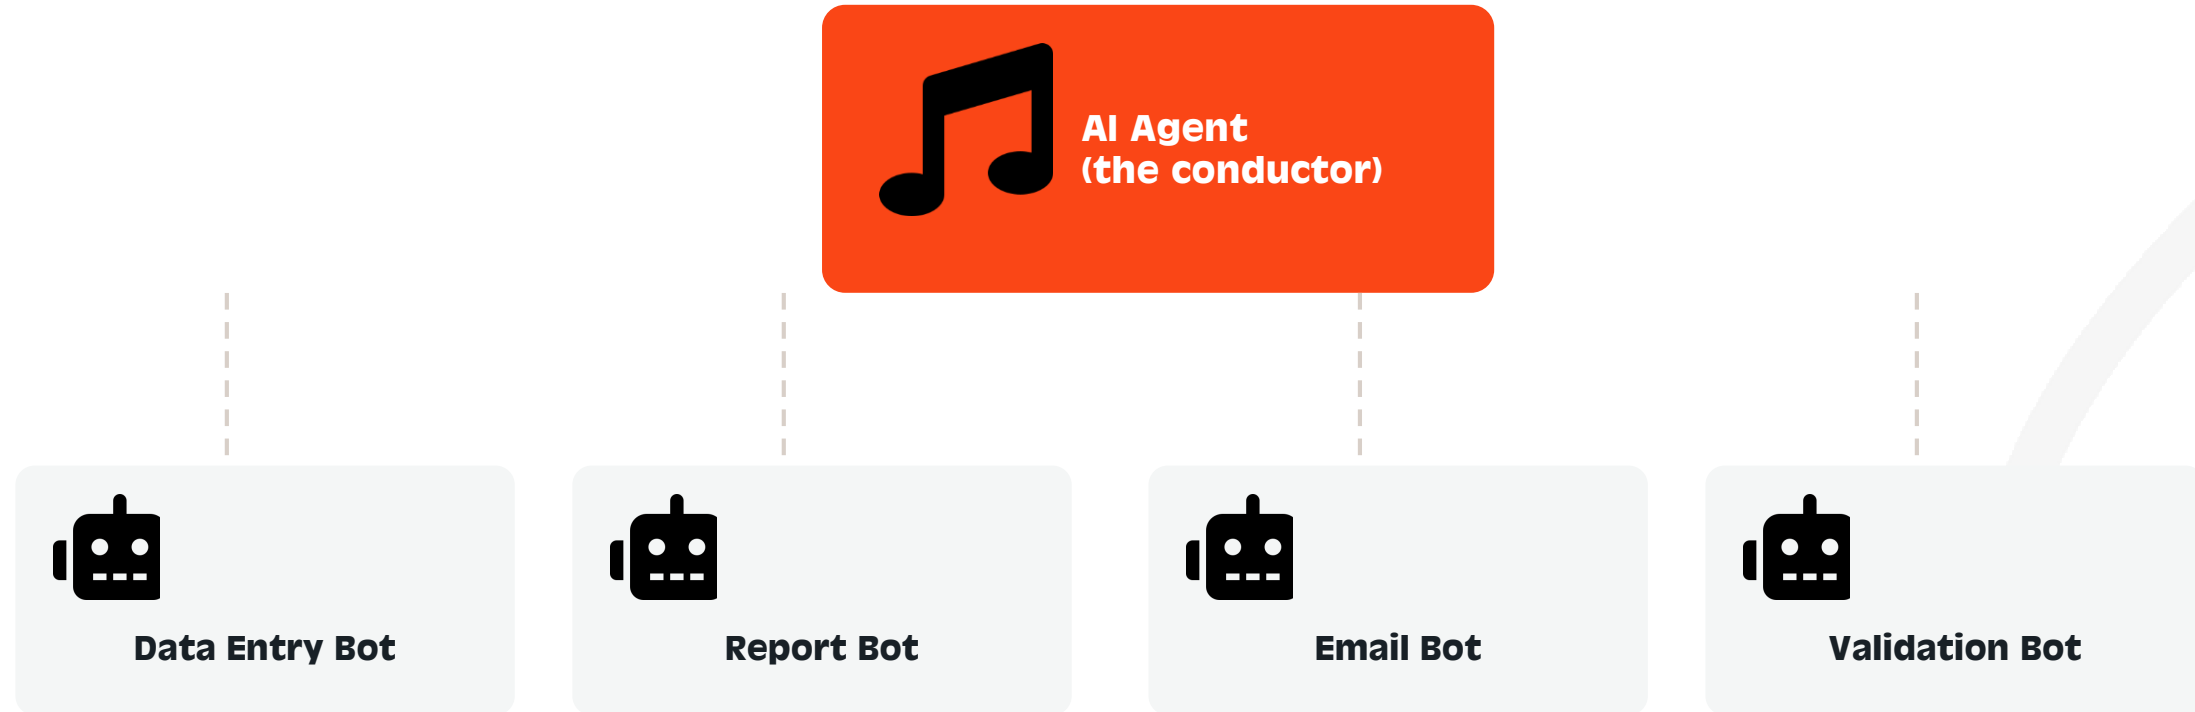

What the Agent does:

- Reads the complaint and understands urgency & category
- Resolves simple queries itself (L1)
- Routes complex ones to the right team, with full context

RPA + Agents = Better Together 🎵

UiPath Community

The Agent acts like a conductor — deciding which bot does what, and when.

RPA bots = strong hands & feet. AI Agent = the brain deciding who does what, when.

The Platform Behind It All: UiPath

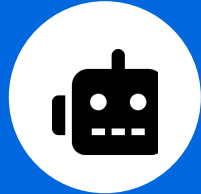

The world's leading RPA + Agentic automation platform, trusted by top companies.

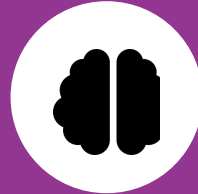

Studio

Visually design your
automation workflows

Orchestrator

Deploy, schedule &
monitor your bots

Agent Builder

Create & train your AI
Agents

Maestro

Orchestrate RPA and
Agents working together

UiPath Studio Web — The Easiest Place to Start

UiPath Community

- ✓ Just a browser — no installation needed
- ✓ No coding skills required, ready-made templates included
- ✓ Works on any OS — Windows, Mac, doesn't matter
- ✓ Automations run on serverless robots — always up to date

**Zero install.
Zero IT tickets.
Just your browser + you.**

What's Next?

Chapter 2

Vibe Code Your First Agent

Watch an agent get built from scratch and deployed — live, right in front of you!

📅 Sat, Aug 1 | 6:30 PM

Chapter 3

Campus, Careers & AI Agents

See how agents solve real student challenges, plus a career roadmap.

📅 Sun, Aug 2 | 6:30 PM

Agent Builder Challenge 🏆

Exclusive to Chapter 1 & 2 attendees!

Use everything you've learned to build your own agent for a real-world problem

Stay with us from Chapter 1 through Agent submission — earn a Program Certificate

Top 3 entries win a goodie voucher worth **₹7,500!**

Timeline details announced at end of Chapter 2 🖱️

What Did You Learn Today? ✓

You know exactly how RPA and AI Agents differ

You've seen how real businesses use automation

'The bot that follows rules' vs 'the agent that thinks' — crystal clear now

You can confidently say 'I get what Agentic Automation means!'

Quiz Time!

Your turn now — let's see if you can spot the Bot from the Agent! 😊

A Big Thank You!
